Nikita Diubachev

DevOps & Platform Engineer

Hong Kong · dyubachev@gmail.com · linkedin.com/in/nikita-diubachev · +995 599 990 253 · gtashnikn1.github.io

SUMMARY

DevOps and platform engineer with 7 years of experience, from Linux system administration to site reliability engineering (SRE) for production Kubernetes platforms. Operated Linux/Windows servers; cut CI/CD build times by up to 70%; migrated legacy applications to Docker and Kubernetes; introduced GitOps with Argo CD and DevSecOps practices with Vault and SAST. Based in Hong Kong, open to remote roles with international English-speaking teams.

EXPERIENCE

Senior DevOps Engineer

Jan 2025 – Present

OTP Group — banking & financial services

Stack: AWS · Terraform · Ansible · Docker · Kubernetes · Helm · Argo CD · Istio · Backstage · Jenkins · GitLab · Vault · PostgreSQL · ClickHouse · Airflow · Spark · Python · Bash

- Designed and optimized CI/CD pipelines for a 50-person engineering org (7 DevOps): dedicated build agents for .NET, npm, and Docker workloads, build caching, and parallelization - reduced build times by up to 70%
- Built and operated delivery infrastructure for a regulated banking environment: AWS and bare-metal with ~60 VPS and 5 Kubernetes clusters across dev, staging, and production, provisioned with Terraform and Ansible
- Built developer self-service tooling: Backstage scaffolder templates for one-click infrastructure provisioning (~20 templates used by 5 teams), plus Python/Bash tooling - eliminating manual DevOps handoffs and ticket-driven provisioning
- Migrated legacy applications to Docker and Kubernetes, replacing manual systemd restarts with horizontally scalable, self-healing services - cut recovery time by 90%
- Implemented GitOps-based deployments with Argo CD, with Istio-based canary releases for progressive, auditable rollouts
- Integrated DevSecOps practices: Vault-based secrets management, service-mesh mTLS (Istio) for east-west traffic encryption, SAST checks, and quality gates in CI/CD
- Supported data platform operations (Airflow, ClickHouse, Spark): diagnosed and resolved failing DAGs and pipeline issues, keeping analytics workloads running for the data team

DevOps Engineer

Oct 2023 – Jan 2025

EPAM — IT services & consulting

Stack: AWS · Terraform · Ansible · Helm · Jenkins · Linux (Ubuntu, Debian, CentOS) · Docker · Kubernetes · Zabbix · Prometheus · Grafana · OpenStack · PostgreSQL · ClickHouse · MongoDB · Elasticsearch

- Ran SRE for production security applications: owned CI/CD for application updates, observability, and troubleshooting for security tooling relied on by production systems
- Managed production Linux infrastructure across Ubuntu, Debian, and CentOS using systemd, Docker, and Kubernetes
- Built monitoring and alerting for ~200 VMs with Prometheus, Grafana, and Zabbix - dashboards, metrics collection, and alert workflows covering the full estate
- Performed incident response for infrastructure, application, and service issues, acting as escalation point for production outages
- Administered OpenStack-based cloud infrastructure: virtual machines, networking, and service availability
- Deployed and supported database clusters (PostgreSQL, ClickHouse, MongoDB, Elasticsearch)
- Automated operational tasks and deployment/maintenance workflows with Python and Bash

System Administrator

Oct 2019 – May 2023

MTS Azbuka Zdorovya — private healthcare clinic

Stack: Linux · VPN · Firewalls · Bash · Python

- Managed Linux-based systems and performed routine server administration tasks
- Monitored system health, investigated incidents, and resolved infrastructure-related issues
- Configured VPN, firewall, and network access rules to support secure remote work
- Supported deployment and configuration of internal applications and development environments
- Wrote Bash/Python scripts to automate system maintenance, backups, log cleanup, and service checks

SKILLS

Cloud & Infrastructure	AWS, Terraform, OpenStack
Containers & Linux	Kubernetes, OpenShift, Docker, Helm, Istio, Linux, Docker Compose
CI/CD & Automation	GitLab CI/CD, GitHub Actions, Jenkins, Ansible, Argo CD, Backstage, Vault, Python, Bash, Git
Observability & SRE	Prometheus, Grafana, Zabbix, ELK Stack, Incident Response
Networking & Security	TCP/IP, DNS, Nginx, VPN, Firewalls
Data	PostgreSQL, ClickHouse, MongoDB, Elasticsearch, MySQL, Redis

EDUCATION

Osaka University
Research student (kenkyusei), Cybersecurity, 2023

Moscow State Linguistic University
Bachelor's degree

LANGUAGES

English (C1) · Japanese (full working proficiency) · Russian (native)
