

Nikita Diubachev

DevOps & Cloud Engineer

Europe · dyubachev@gmail.com · linkedin.com/in/nikita-diubachev · +995 599 990 253 · gtashnikn1.github.io

SUMMARY

DevOps and cloud engineer with 7 years of experience, from Linux system administration to site reliability engineering (SRE) for production Kubernetes platforms. Operated 1,000+ servers; cut CI/CD build times by up to 70%; migrated legacy applications to Docker and Kubernetes; introduced GitOps with Argo CD and DevSecOps practices with Vault and SAST. Based in Europe, open to remote roles with international English-speaking teams.

EXPERIENCE

DevOps Engineer

Jan 2025 – Present

DataFusion — IT outsourcing, embedded with a financial sector client

Stack: AWS · Terraform · Ansible · Docker · Kubernetes · Helm · Argo CD · Jenkins · GitLab · Vault · PostgreSQL · ClickHouse · Python · Bash · n8n

- ▶ Led infrastructure and application architecture improvements to enable horizontal scaling, replication, and fault-tolerant service operation
- ▶ Designed and optimized CI/CD pipelines with dedicated build agents for .NET, npm, and Docker workloads, build caching, and parallelization — reduced build times by up to 70%
- ▶ Migrated legacy applications to Docker and Kubernetes — cut recovery time by 90% by replacing manual systemd restarts with automatic pod self-healing
- ▶ Implemented GitOps-based deployments with Argo CD, replacing manual release processes with automated, version-controlled deployments
- ▶ Integrated DevSecOps practices: Vault-based secrets management, SAST checks, and quality gates in CI/CD pipelines
- ▶ Automated repetitive engineering and operational workflows using Python, Bash, n8n, and LLM-assisted tooling, reducing manual handoffs and improving delivery speed

DevOps Engineer

Oct 2023 – Jan 2025

AT Consulting — IT outsourcing, DevOps for small & medium business clients

Stack: AWS · Terraform · Ansible · Helm · Jenkins · Linux (Ubuntu, Debian, CentOS) · Docker · Kubernetes · Zabbix · Prometheus · Grafana · OpenStack · PostgreSQL · ClickHouse · MongoDB · Elasticsearch

- ▶ Managed production security services across Linux-based infrastructure using systemd, Docker, and Kubernetes
- ▶ Built and maintained monitoring dashboards, metrics collection, and alerting workflows with Zabbix, Prometheus, and Grafana
- ▶ Performed incident response for infrastructure, application, and service issues across Ubuntu, Debian, and CentOS environments
- ▶ Administered OpenStack-based cloud infrastructure, including virtual machines, networking, and service availability
- ▶ Deployed and supported database clusters for PostgreSQL, ClickHouse, MongoDB, and Elasticsearch
- ▶ Developed Python and Bash scripts to automate repetitive operational tasks and improve deployment and maintenance workflows

System Administrator

Oct 2019 – May 2023

MTS Azbuka Zdorovya — private healthcare clinic

Stack: Linux · VPN · Firewalls · Bash · Python

- ▶ Managed Linux-based systems and performed routine server administration tasks
- ▶ Monitored system health, investigated incidents, and resolved infrastructure-related issues
- ▶ Configured VPN, firewall, and network access rules to support secure remote work
- ▶ Supported deployment and configuration of internal applications and development environments
- ▶ Wrote Bash/Python scripts to automate system maintenance, backups, log cleanup, and service checks

SKILLS

Cloud & Infrastructure

AWS, Terraform, OpenStack

Containers & Linux

Kubernetes, OpenShift, Docker, Helm, Linux, Docker Compose

CI/CD & Automation

GitLab CI/CD, GitHub Actions, Jenkins, Ansible, Argo CD, Vault, n8n, Python, Bash, Git

Observability & SRE

Prometheus, Grafana, Zabbix, ELK Stack, Incident Response

Networking & Security

TCP/IP, DNS, Nginx, VPN, Firewalls

Data

PostgreSQL, ClickHouse, MongoDB, Elasticsearch, MySQL, Redis

EDUCATION

Osaka University

Research student (kenkyusei), Cybersecurity, 2023

Moscow State Linguistic University

Bachelor's degree, Linguistics

LANGUAGES

Russian (native) · English (C1) · Japanese (full working proficiency)
